

## Dr. Thomas Hale presents Medications and Breastfeeding October 27-28, 2009

### The workshops:

#### Drugs and Breastfeeding

This session will describe the transmission of drugs into breastmilk and how and when optimal breastfeeding can occur. This session also discusses breastfeeding after diagnosis procedures.

#### Birth Medications and Their Relationship with Breastfeeding Outcomes

The session will describe the impact medications during labor and their transmission to the fetus. It also covers the timing of medication administration and the impact on breastfeeding.

*\*Please note that the workshops will be in English only.*

### About Dr. Thomas Hale

THOMAS HALE, R.Ph., Ph.D. is an experienced clinical pharmacologist and has extensive experience in lecturing in all areas of pharmacology and therapeutics. He is considered a leading expert in the use of medications in breastfeeding women and travels internationally

lecturing on this topic. He is the author and co-author of many books used throughout the world by physicians, nurses, NICUs, Obstetrical units and Lactation consultants.
